README.md

HTML5 Test Page

npm package **0.8.0**

This is a test page filled with common HTML elements to be used to provide visual feedback whilst building CSS systems and frameworks.

I have not been able to find a dead-simple, standalone test page out there, so I made one. The HTML elements are loosely categorized as either text, embedded content, or form elements.

Versioning

HTML5 Test Page will be maintained using the [Semantic Versioning](#) guidelines. From here on out, releases will be numbered using the following format:

major.minor.patch

- Breaking backwards compatibility increments `major` , while resetting `minor` and `patch` .
- New code that does not break backwards compatibility increments `minor` , while resetting `patch` .
- Bug fixes and other small changes increment `patch` .

Credits

Made by [@cbracco](#). This project is based on the [test file](#) included in [@necolas's normalize.css](#) project.
